

Mobile Alignment Systems

Take Your Alignment Services on Site

RAV Mobile Alignment System

Transport Your RAV Alignment System Safely and Conveniently On Site To The Customer's Location

Instrument Case

Custom military grade foam filled case on locking casters. Four latches secure the dust and water proof seal. Custom high density foam provides a snug fit and superior protection for laptop, 4 Bluetooth sensor heads, printer and power box. Simply connect power supply cord to 115V outlet at night to charge components.

The ultimate way to protect your alignment system and insure that it works when you need it to.

Each case measures 52" L x 32" W x 30" H.

Fast Clamp Case

The FastClamp storage case is a duplicate of the case used to house our electronic instruments. Once again high density foam has been custom cut to provide a safe and secure way of transporting the wheel clamps. Since very little assembly is needed these adaptors can be prepped in 5 minutes once you reach the job site.
